

Abdelrahman Ahmed Al-Meshwady

Alexandria, Egypt | [\(+20\)1116351047](tel:+201116351047) | abdelrahman.almeshwady@gmail.com
www.linkedin.com/in/abdelrahman-al-meshwady | <https://github.com/BodaTheDev>

Results-oriented Backend Engineer specializing in the modern Node.js ecosystem with advanced expertise in **TypeScript**, **NestJS**, and **Express.js**. Proven ability to architect and build modular, type-safe, and highly maintainable applications. I leverage design patterns like Dependency Injection and a service-oriented approach to deliver enterprise-grade systems for Fintech, IoT, and E-commerce.

Work Experience

Root Co. Software House | Alexandria, Egypt

Backend Developer | February 2025 - Present

- Designed and maintained scalable backend services using **Node.js**, leveraging the flexibility of **Express.js** for prototyping and the structured, modular architecture of **NestJS** for enterprise applications.
- Engineered RESTful APIs with **TypeScript** to enforce type safety, reduce runtime errors, and improve developer experience through self-documentation.
- Implemented authentication, authorization, and security best practices using JWT, role-based access control, and secure third-party integrations.
- Collaborated with cross-functional teams, participated in code reviews, and supported the deployment and monitoring of backend services in production.

Project Manager | April 2022 - January 2025

- Coordinated cross-functional engineering teams and aligned technical execution with business goals using Agile methodologies.
 - Acted as the main technical point of contact between stakeholders and engineering teams.
 - Oversaw delivery, risk management, and scope alignment for multiple software projects.
-

Key Projects

WeCare App (IoT & Real-time Tracking)

- Architected the complete backend lifecycle: built the initial production-grade system using Python (Django) for robust business logic, then strategically migrated the real-time tracking module to Node.js to scale WebSocket concurrency to over 1,000 users.
- Designed a containerized microservices architecture using Docker Compose, orchestrating backend services, databases, brokers, and media servers.
- Built real-time bus tracking and proximity alert features using MQTT and Redis geospatial queries, enabling live trip monitoring.
- Implemented secure, self-hosted live video streaming for bus cameras using WebRTC and HLS, reducing reliance on third-party services.

Relive App (Telehealth & RTC)

- Built a modular, production-ready Node.js backend for Relive, a telehealth platform, with secure multi-role authentication and integrated payments (TAP).
 - Delivered scalable APIs for appointments, prescriptions, content, and notifications, ensuring high performance, maintainability, and robust security.
-

Technical Skills

- Languages & Frameworks: TypeScript, JavaScript (Node.js), NestJS, Express.js, Python, Django, SQL
 - Databases & APIs: MongoDB, PostgreSQL, TypeORM/Prisma, RESTful API Design, JWT Authentication
 - DevOps & Infrastructure: Docker, Nginx, PM2, Ubuntu Server, AWS, Vercel, SSL/DNS Management
 - Tools & Methodologies: Git, GitHub, Agile (Scrum, Kanban), Jira, ClickUp, Trello
 - Collaboration & Design Tools: Figma, Photoshop, Illustrator, Adobe XD
-

Professional Development & Key Coursework

- NodeJS – The Complete Guide (Udemy) | The Complete Flutter & Dart Development Course (Udemy)
-

Education

- Bachelor of Commerce, Accounting (English Dept.) | Alexandria University, Graduated 2022
